

FOR IMMEDIATE RELEASE

First Crypto Stamps (QRG) from Gibraltar trading on the IDCM.io exchange.

Gibraltar - December 17, 2018

Crypto currency is one of the most innovative new financial technologies available. Gibraltar is at the forefront of this promising digital financial engineering and has been receiving high acclaim within global distributed ledger technology and cryptocurrency circles. In early 2018, Gibraltar became one of the first jurisdictions in the world to regulate businesses and individuals who are using distributed ledger technologies to hold or transfer value for others.

Gibraltar Royal Post now wishes to commemorate this innovative new technology by issuing a stamp to highlight and demonstrate this new technology with [ORG Stamps](#). The design, as you can see, features 4 identical QR Codes. Any of these 4 identical QR Codes when scanned with a smartphone/tablet offers the opportunity for first time owners of these collectible blocks to collect crypto coins which could be trading.

In order to make this QR code and unique concept a reality this site has been created to permit first owners of these limited-edition blocks to redeem 200 QRG Cryptocurrency tokens/coins for each block of these stamps, one time only per unique serial number. To learn more, visit www.qrg-stamps.com

About IDCM.io Exchange

IDCM is a global-leading digital asset exchange platform which provides quality digital currency trading and investment services. It is one of the pioneering exchanges to implement the best of both worlds - centralized exchanges and decentralized exchanges. IDCM exchange is a branch of IDCG that had realized the disadvantages of both centralized and decentralized exchanges early on. This had led IDCG to form International Digital Currency Markets exchange that is the first to use a consensus mechanism.
